

Haotian AI, The Scammers AI Service, Launches Free Face Swap Robot On Telegram

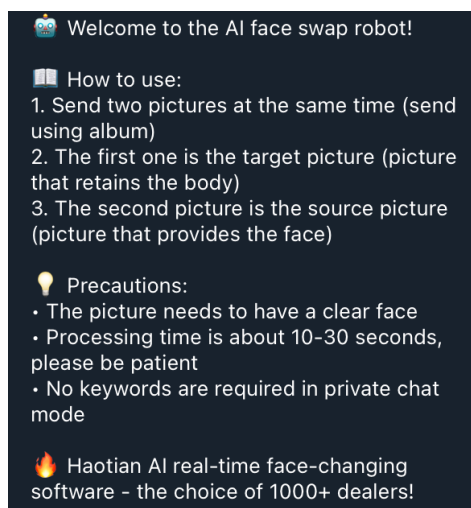

Haotian AI is used by most of the Pig Butchering call centers for AI models video calls.

AI models use the software to swap their faces in Realtime to fool victims and make them believe they are real.

This week, Haotian AI announced the launch of a new free service on Telegram, to help scammers swap faces on images using the same technology that they use for the Realtime deepfake videos.

The service already boasts over **21,000 active members** and is quite popular. The channel is called The Crepy Bot and can be found here - <https://t.me/ThecrepyBot>

The service is easy to use, simply upload two photos at the exact same time- a source photo and a target photo.

Your source photo will automatically swap faces on the target photo enabling a scammer to catfish any victim across any picture.

Does The Service Work? Can I Become Tom Selleck?

I tried the service and uploaded a single image of myself and an image of Tom Selleck and this was the result. Close but no cigar..

There is fast growing number of ChatGPT like AI sites serving scammers all over Telegram now. They are easy to use free services that are overrun with people using the services to commit scams. I highlighted Super-AI several weeks ago and that group has over 100,000 members.
